

Press release LUNOS

LUNOS brings fresh air into kindergartens

The ASB day care center Tollhaus am Wald in Falkensee, Brandenburg, one of eight facilities of the Arbeiter-Samariter-Bund Falkensee, has been equipped with a complete ventilation system by LUNOS. Twelve Nexxt, three LUNOMAT, four e² and four Silvento ec now ventilate the rooms of the day care center.

In the combined system installed here, the heat recovery system and the exhaust air system are used together. While the day-care center's common rooms and offices now have constant fresh air without heat loss thanks to heat recovery units, the classic exhaust air rooms such as bathrooms and kitchens can be ventilated cost-effectively as required.

For the first time, tilted windows and turning up the heating at the same time are a thing of the past. "The LUNOS ventilation system now ventilates permanently without us really noticing. It stays nice and warm in the rooms and the children can play in the best indoor air," reports Peggy Richter, head of the Tollhaus daycare center. "We are all really enthusiastic, including the parents, who can see for themselves every day that the ventilation system is working well." To inform everyone about the new ventilation system, LUNOS has laid out flyers in the daycare center.

The high savings on heating costs are not the only reason why the daycare center management is happy. Ms. Richter, who has suffered from a pollen allergy for years, is particularly pleased: "At last I can breathe easily. I would love to move into the office."

LUNOS Lüftungstechnik GmbH is a Berlin-based manufacturer of ventilation units. LUNOS has been producing its devices Made in Germany for over 60 years and is the market leader for decentralized home ventilation. The units installed in this nursery not only ventilate nurseries so well, but also schools, offices and your home.
